Moto2Ride on your website

Embed guide: the motorcycle finder and comparison in a frame on your page

Show the Moto2Ride motorcycle finder on a page of your website. Your readers answer a few questions, get a short list of motorcycles that fit their licence, budget and height, and compare models side by side, without leaving your page.

How it works

- The finder runs in a frame (iframe) loaded from moto2ride.com. It always shows our current data: there is nothing for you to update.
- Links that lead away from the finder (maker websites, our full site) open in a new tab, so your page stays open.
- The frame is marked noindex: search engines index your page, not the frame.

Free for any website

> The code works on any website, free of charge: there is nothing to activate and no need to ask us first.
>
> We like to know where the finder is used: a short note to info@moto2ride.com with the address of your page helps us, but it is not required.

The code

Paste this code where the finder should appear:

```
<iframe src="https://moto2ride.com/embed/?lang=en&cur=GBP"
title="Moto2Ride motorcycle finder and comparison"
style="display:block;width:100%;height:85vh;min-height:560px;border:0"
allow="clipboard-write; web-share" referrerpolicy="strict-origin-when-cross-origin"></iframe>
```

> lang= sets the language and cur= the currency of the prices (the lists are below). To let each reader see the currency of their own country, delete &cur=GBP from the address.

The language is set by lang= in the address. Replace the code after lang= with one of these:

CODE	LANGUAGE	CODE	LANGUAGE
en	English	pl	Polski
de	Deutsch	cs	Čeština
fr	Français	el	Ελληνικά
es	Español	pt-PT	Português
it	Italiano	nl	Nederlands

Without lang=, or with a code not in this list, the finder opens in English. The codes are case sensitive: pt-PT, not pt-pt. Readers can also switch the language inside the frame.

The currency of the prices is set by cur= in the address, added after the language with &, for example https://moto2ride.com/embed/?lang=en&cur=GBP. The codes:

CODE	CURRENCY
EUR	Euro
GBP	British pound
PLN	Polish zloty

CODE	CURRENCY
CHF	Swiss franc
CZK	Czech koruna

Without cur=, each reader sees the currency of their country, as their browser gives it (for example CHF in Switzerland), otherwise PLN for Polish, CZK for Czech and EUR for the other languages. Readers can also switch the currency inside the frame.

Frame size

The size is set by the style="..." part of the code. Choose one of these three and replace the style part with it:

A. Full screen (recommended)

The frame fills most of the screen and the finder scrolls inside it. The comparison bar and the comparison window always stay in view, on computers and phones.

```
style="display:block;width:100%;height:85vh;min-height:560px;border:0"
```

B. Fixed height

For a block inside an article. On a phone with a screen shorter than 760 px, the comparison bar sits below the screen until the reader scrolls your page.

```
style="display:block;width:100%;height:760px;border:0"
```

C. Narrow, centred

For wide page layouts: at most 720 px wide, in the middle of the page.

```
style="display:block;width:100%;max-width:720px;margin:0 auto;height:85vh;min-height:560px;border:0"
```

The finder works from 320 px wide. Give the frame at least 560 px of height. Do not use scripts that stretch the frame to the height of its content: the comparison window would then open outside the screen.

Install in WordPress

WordPress with the block editor (WordPress 5.0 and later; checked on WordPress 7.1):

1. In the dashboard, click Pages > Add Page. If a welcome window opens, close it. Enter a title, for example "Motorcycle finder".
2. Click the + button at the top left (Block Inserter), type Custom HTML and choose the Custom HTML block.
3. Paste the code. In WordPress 7 and later, click Edit HTML in the block, paste the code into the HTML tab and click Update. In older versions, paste it straight into the block.
4. Check the page: click the screen icon at the top right, next to Publish, then Preview in new tab (older versions: Preview). The finder should appear in the page.
5. Click Publish, then Publish again to confirm.

> If the finder looks squeezed in a narrow column, choose a full-width layout for this page: in the page settings on the right (Template), or in Appearance > Customize. Example, Twenty Seventeen theme: open the page on your website, click Customize in the top bar, then Theme Options > Page Layout > One Column (the Theme Options section appears only while a page is shown, and the setting applies to all pages).

Add the page to your menu

1. Click Appearance > Menus.
2. In the Pages box on the left, tick the new page and click Add to Menu.
3. Click Save Menu (a website without a menu: enter a Menu Name, click Create Menu, and choose where it shows under Menu Settings). Open your website: the new menu item opens the finder.

Block themes (for example Twenty Twenty-Four) have no Menus screen: click Appearance > Editor > Navigation, open your menu, click + and add the page.

Classic editor: open the Text tab (not Visual) and paste the code there.

Other website systems

Any system that lets you add HTML to a page works. For example:

Joomla	In an article, click Toggle Editor and paste the code. If the frame is gone after saving, the text filter removed it: ask your administrator to allow iframe in System > Global Configuration > Text Filters.
Squarespace	Add a Code block and paste the code.
Webflow	Add an Embed element and paste the code.
Wix	Add Embed Code > Embed HTML and paste the code.

Test it

Before you install, open the embed page: https://moto2ride.com/embed-finder/. Pick a language and a size, try the finder at phone width, and copy the finished code.

After you install, check your page:

- [ ] The finder appears in the right language.
- [ ] A search shows a list of motorcycles.
- [ ] Add two motorcycles to the comparison, open it, then close it.
- [ ] On a phone: the same steps, and the comparison bar is visible.
- [ ] A link to a maker website opens in a new tab.

If something does not work

WHAT YOU SEE	CAUSE AND FIX
The frame is empty or shows an error.	Check that the code was pasted whole. If your website sends its own Content-Security-Policy header, add https://moto2ride.com to frame-src. Some ad blockers and privacy extensions block frames: try a private window.

WHAT YOU SEE	CAUSE AND FIX
The code is gone after saving.	Your system removes frames for your user role. In WordPress, only administrators and editors may add them (on a multisite network only super admins). In Joomla, see Other website systems.
Two scroll bars, or the comparison bar is hidden on a phone.	Use size A (full screen).
The finder opens in the wrong language.	Check the code after lang= in the address (see The code).

Privacy and data

- The finder sets no cookies and has no analytics, advertising or tracking.
- In the frame it keeps only the language and currency a reader picks, in the reader's browser (local storage).
- When your page opens, the reader's browser loads the frame from moto2ride.com. Our host logs that request like any visit (IP address, time, page). A search that finds no motorcycle is sent to us without any identifier, so we learn which bikes our data is missing.
- Full details: https://moto2ride.com/privacy/. You may want to mention the embedded Moto2Ride finder in your own privacy policy.
